

PORTABLE ALUMINUM BANDSAW
PATENTS PENDING

At + 40 lbs. this light but rugged portable bandsaw is powerful enough to cut 8" x 8" beams yet light enough to ride on a 2" x 4". It is TRULY portable.

Model shown features 9" cut-depth with full 16" throat but these dimensions can be taylored to your individual needs. You have choices in blade guides, motor voltage, table and blade sizes, or an optional transport system.

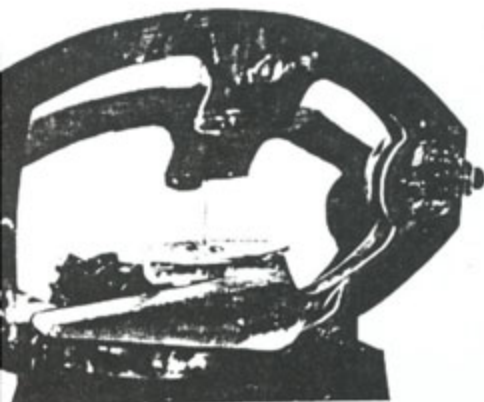

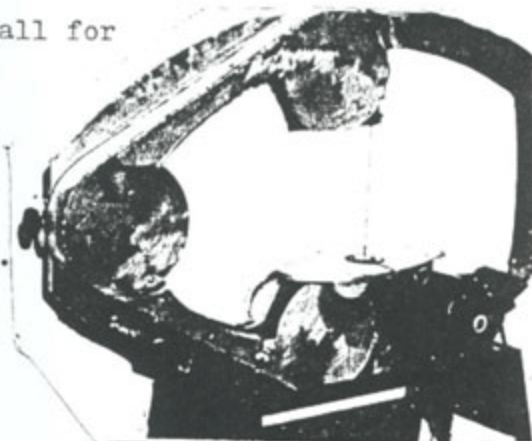

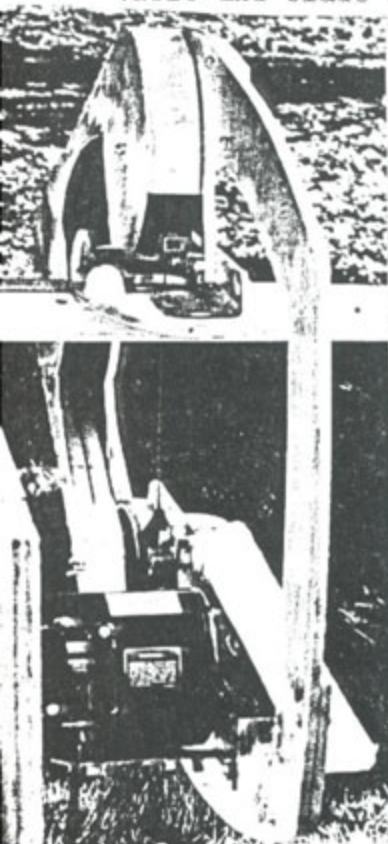

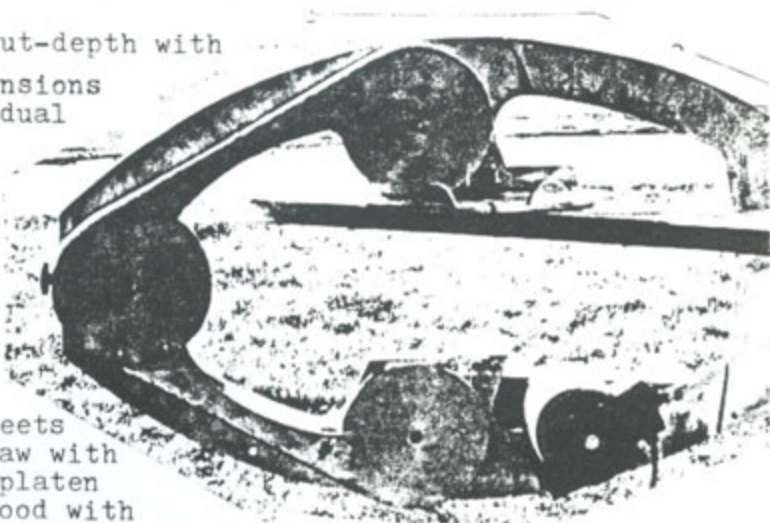

PERFECTLY balanced at the point where blade meets wood, this saw with frictionless platen glides over wood with minimal thumb pressure, cutting 2" radiuses through 8" x 8" beams with ease and accuracy, for even inexperienced operators.

By means of easily reversible table it becomes a regular floor-standing bandsaw for cutting metal, sign letters, et Stand is included.

Because it is still in the research and development stages, your design input and special application needs are important to me and each custom built bandsaw will be built with your specs in mind.

Model shown cost \$3750. Call for demonstration and further information.

Model shown features detachable frame member which opens loop to form traditional "C" configuration, permitting side entry to table tops, signs, plywood, etc.
